TITLE:

Some remarks on the class L of probability distributions

PERIODICAL:

Referativnyy zhurnal. Matematika, no. 6, 1962, 2, abstract  
6V7 (Bull. Acad. polon. sci. Ser. sci. math., astron, et  
phys., v. 9, no. 5, 1961, 335-336)

TEXT: An interesting fact relating to the structure of class L is established (Gnedenko, B. V., Kolmogorov, A. N., Predel'nyye teoremy dlya summ nezavisimyykh sluchaynykh velichin - Limiting theorems for sums of independent random values, 1949). Class  $Q$  is found to be such that the totality of finite compositions of the laws of class  $Q$  and of the limits of such compositions coincides with class L. Class  $Q$  is described in terms of the functions  $G$  in the canonical formula of Levi and Khinchin for laws divisible without limitation. If we go over to Levi's functions  $M$  and  $N$ , then class  $Q$  can be described in the following way: It includes: (a) all the normal laws and all the distributions with continuous  $M$  and  $N$ , for which either (b)  $N(u) = 0$ ;  $uM'(u) = \text{const}$ ,  $u_0 < u < 0$ ;  $uM'(u) = 0$ ,

Some remarks on the class L of...

$u < u_0$ , or (c)  $M(u) = 0$ ;  $uN'(u) = \text{const}$ ,  $0 < u < u_1$ ;  $uN'(u) = 0$ ,  $u > u_1$ .

The author's result can be understood if we approximate the non-decreasing (in class L) functions  $uM'(u)$   $uN'(u)$  as step functions. [Abstracter's note: Complete translation.]

Experimentální a klinické zkušenosti s Pelentan-Rapidem Experimental and clinical experiences with Pelentan Rapid Casopis Lékarů Českých 1948, 87/2 (36-41) Graphs 2

Experimental and clinical experiences with a new anticoagulant of the coumarine series. Pelentan Rapid is the commercial name of the ethylester of di-(4-oxycoumarinyl) acetic acid. It is about one-fourth the strength of dicoumarol, but it controls the prothrombin level better and acts quicker, and after discontinuation of the drug the normal prothrombin level is restored more quickly than with dicoumarol. Doses ten times higher than the maximum amount therapeutically given were not toxic (experiments on animals). Contra-indications are less frequent than with dicoumarol.

Pelentan-Rapid v terapii chorob cervnich 'Pelentan-Rapid' (coumarin derivative) in the treatment of vascular affections Casopis Lekaru Ceskych 1949 07/11 (312-320)  
Graphs 4 Tables 1

Clinical experiences with treatment of 260 cases of vascular diseases with the new compound of coumarin (Pelentan-Rapid, ethylester of di-4-oxycoumarinyl acetic acid) are described. It was found that Pelentan-Rapid has the therapeutic properties of American dicoumarol without its toxicity and therefore diminished danger of bleeding. The possibility of prolonged administration in chronic vascular diseases is therefore its great advantage. Kolac-Prague (Sec. VI)

REJSEK K. and KUBIK M. PRÍSPEVEK ke koagulogramu Contribution to the coagulogram Časopis  
Lékařů Českých 1948, 87/32 (879-880)

Observation of the formation of fibrin crystals with the Fonio-Schwenderer method gave the following results: In normal blood formation of the fibrin network is very rapid and the crystals are thick and short. In hypoprothrombinaemia, caused either by dioxycoumarin or by damage to the liver, the first fibrin crystal appears at the same time as in normal blood, but the crystals are very fine and thin. After injection of heparin the fibrin is not formed, but in blood taken three hours later the fibrin network starts to grow at the normal time and with normal speed but the crystals are thin and bristle-like.

 Title : Adhesive Properties of Blood Platelets  
 Crig Pub : Vnitřní lékařství, 1957, 3, No 5, 441-447

Abstract : In 29 healthy individuals 16 - 69 years of age and in 50 patients with arteriosclerosis, obliterative endarteritis, coronary disease, varicose changes of the veins, etc. a study was made of the adhesive properties of blood platelets using the Moulton technique with the author's modification (use of a glass filter with a porosity of 15 to 40  $\mu$ ). The number of blood platelets was determined by placing citrated blood on glass fibers woven into the shape of a mesh. In healthy people up to 40 years of age the BP consisted on an average of 63,660,

and in older ages of 70,645. In arteriosclerosis with obliteration of the vessels the figures were close to normal in 81.8% of the patients, and in obliterative endarteritis there was an increase in 33% of the patients. Adhesiveness of BP was increased in the processes of destruction of the tissues and cells in the organism: after operation or childbirth, in the period clinically characterized by frequent occurrences of thrombosis, in myocardial infarction, pulmonary infarction, gangrenous processes, etc. Increase in adhesive properties was also observed with an increase in the number of BP in the blood, for example, with polycythemia vera, idiopathic thrombocythemia, and essential thrombophilia. -- A.I. TITLE: The Zyryanovskaya Prospecting Committee Puts Into Action the Decisions of the Communist Party

PERIODICAL: Razvedka i okhrana nedr, 1959, Nr 3, pp 51-54, (USSR)

ABSTRACT: The article deals with the trade-union aspects of the Zyryanovskaya Geological and Prospecting Expedition in Kazakhstan, noted for its discovery of the Zyryanovskoye polymetallic ore deposit. Its chief is S.M. Groznykh and its chief geologist - I.K. Neklyudov. Among the innovations, the following new techniques are employed or being introduced there: 1) the so called "directed" drilling to fight drilling errors with regard to both azimuth and zenith; 2) testing coreless drilling of soft rocks (hardness up to Class IV) deposited above the ore stratum, with highly effective drilling results achieved due to milling cutters; 3) shot is fed into the well hole in small dosages by a new shot feeding machine of the D-3-type to fight oblique drilling; 4) a new method to drill hard rocks by using a

The Zyryanovskiy Prospecting Committee Puts Into Action the Decisions of the Communist Party

combination of shot and "sechka" (steel fragments cut to small pieces like chopped straw) is being developed. The expedition, among others, employs a ZIF-1200A-type drill rig and a mechanism of the FO-47A-type for screwing together and unscrewing the pipes. In matters of competition, the Leninogorskaya geologorazvedochnaya ekspeditsiya (Leninogorsk Geological and Prospecting Expedition) and BRIZ are mentioned.

Title : ~~Calculation of a~~ Nonlinear Circuit Excited by an Alternating Voltage.

Orig Pub : Slaboproudý obzor, 1956, 17, No 7, 368-375

Abstract : Examination of the calculation of a circuit with nonlinear mutual inductance. The circuit is described by a nonlinear differential equation of the second order, the right half of which contains the time  $t$ . A specific example is used to show how the phase-plane method can be used to determine the transient and steady state processes in the case of forced oscillations in nonlinear circuits. The good agreement between theory and experiment is noted.

TITLE: The approximate solution of automatic control circuits  
with unsymmetrical and multivalued nonlinearities

PERIODICAL: Elektrotechnický časopis, no. 9, 1961, 566-579

TEXT: In the solution of such systems, the presence of constant terms can be taken into account in a modified describing function method, in which the zero-order term is included along with the fundamental component. Three conditions are obtained for the analysis of the system: a condition on the existence of a constant component, a condition of amplitude equilibrium, a condition of phase equilibrium. The method is successively applied to systems with a single multivalued nonlinear element, a circuit with two unsymmetrical nonlinearities, and a system with  $n$  unsymmetrical nonlinearities. A final example concerns a nonlinear element with the characteristic dependent not only on the input quantity but also on its derivative. There are 10 figures and 6 Soviet-bloc references.

526. STUDY OF THE DEPARTMENT FOR OCCUPATIONAL HYGIENE OF THE HYGIENIC-EPIDEMIOLOGICAL DISTRICT BUREAUS IN SLOVAKIA. Prieskum oddelení hygieny práce khes na Slovensku. Kubík Š. and Luknářová L. Oblastného Ústavu Hygieny Práce a Chorób a Povolania, Bratislava. LEK.OBZOR 1957, 6/1 (39-48)

In every district of the Czechoslovakian Republic (there are 19 districts in total), there is a department for occupational hygiene with the following tasks: (1) Preventive supervision on the maintenance of the sanitary-hygienic standards in the protection and construction of new industrial works or change of the technological process. (2) Continuous supervision of the hygienic condition of all industrial works. (3) Study of the hygienic conditions of the industries, their working conditions, the number of diseases and accidents. (4) Setting up of rules to improve the hygiene of working conditions, and checking whether these rules are carried into effect. (5) Methodical instruction of industrial doctors etc. The staff consists of doctors and technicians; laboratories for the analysis of biological and industrial material are available. The purpose of this article is to improve this work, by comparing the activities of the different departments in Slovakia, and by pointing out mistakes and advantages.

"Ten Years of the Institute of Work Hygiene and Occupational Medicine in Bratislava. Development and Activity of the Section on Work Hygiene."

Prague, Pracovní Lékarství, Vol 15, No 1, Jan 1963; pp 19-21.

Abstract: This section now has a staff of 20, and its work during the decade was primarily on prevention and treatment of occupational diseases in agriculture: pesticide toxicity, tractors and various mechanized aids to production in farming. Some research was done on toxicology of antimony and occupational risks to health in mining and refining Sb; polycyclic hydrocarbons; toxicology of furan and its metabolite furoylglycine; methyl chloride microanalysis. Continuous cooperation not only with the field workers, but with many other scientific and academic institutions. There were 68 publications, 12 reviews, 16 popular educative articles, 3 textbooks.

"Comments to the Article by Ing Dr J. KUBEC on 'Allowable Noise in  
Industrial Conditions.'"

Prague, Pracovní Lékařství, Vol 15, No 1, Jan 1963; pp 37-38.

Abstract: The officially set highest permissible level of noise in  
Czechoslovakia, like in Poland, Hungary, Norway and Finland is 85  
decibels, but it disregards the spectral composition of the sound and  
is unsuitable for that reason alone; also it is probably slightly too  
high. Noise has complex effects on the central nervous system and  
endocrine organs in addition to its adverse direct effects on the ear;  
further research in this field is therefore necessary.

"Medical Prevention of Chronic Acoustic Trauma."

Prague, Pracovni Lekarstvi, Vol 18, No 4, May 66, pp 176 - 179

Abstract [Author's English summary modified]: Method for testing employees who will be working in locations subjected to a noise hazard is described, and a follow-up system during work at such places is discussed. Examinations should be made frequently during the first year of employment; their frequency should depend on the degree of noise and the sensitivity of the individual. 4 Western, 4 Czech, 3 Russian references. (Manuscript received 4 May 65).

"Research Covering the Malignant Nature of Noise"

Prague, Pracovni Lekarstvi, Vol 18, No 5, Jun 66, pp 224-225

Abstract: The damage caused to the hearing organs by excessive levels of noise is discussed. Not only the hearing organs, but also the vegetative and psychic functions are damaged by high levels of noise. Vegetative changes in peripheral skin arteries due to noise are described; high levels may affect the heart by increased resistance to blood flow through these arteries. Arteriosclerosis may be due to high levels of noise. Maximum safe levels of noise are 35 db. Noise can cause deterioration in some diseases, and slow down healing after surgery. It also decreases production output of healthy workers. 13 Western, 2 Czech, 9 Eastern references. (Manuscript received 31 Jul 65.)

"Metabolic Changes During 24-hour Starvation of Rats."

Prague, Ceskoslovenska Fysiologie, Vol 15, No 2, Feb 66, p 81

Abstract: The rats were fed Larsen diet ad libitum before the experiments. Duration of starvation period studied was: 0, 3, 6, 9, 12, 16 and 24 hours. Glycemia decreases as early as 3 hours after withdrawal of food and goes on decreasing for 9 more hours, after which its level is constant at 50-60 mg%. The glycogen content of liver decreases in 12 hours from 4-5% to 0.1-0.2%, and then remains steady. Glycogen content of the myocardium did not change during the experiment. The level of non-esterified fatty acids in the serum reaches double its original level in 12 hours, and does not change further. Esterified acids decrease in the first 6 hours and then slowly increase to the original level. 2 Western references. Submitted at "16 Days of Physiology" at Kosice, 29 Sep 65.

*Influence of vernalization and supplementary fertilization on development and yields of potatoes. M. Birecki and K. Kutski (Rozpr. Nauk rol., 1954, 69, A, 471—527).—The effects on tuber growth of rainfall and temp. are examined in relation to conditions in Poland. Vernalization increases yields and starch contents of the tubers and expedites maturing without loss in yield. Increases in yields obtained by combined vernalization and supplementary manuring are greater than the sum of the increases obtained by separate treatments. The responses to these treatments of different varieties under different climatic conditions are investigated.*

TITLE: Effect of curare on sleep cycles in rats [This paper was presented at the Third Interdisciplinary Conference on Experimental and Clinical Study of Higher Nervous Functions held in Marianske Lazne from 19 to 23 October 1964.]

SOURCE: Activitas nervosa superior, v. 7, no. 2, 1965, 147-148

TOPIC TAGS: drug effect, rat, behavior pattern, cerebral cortex, EEG, nervous system drug

ABSTRACT: Experiments were carried out on 8 rats with electrodes implanted in the cerebral cortex, dorsal hippocampus and mesencephalic reticular formation. EEG was continuously recorded. Trachea was prepared and left in situ and again EEG recorded. Next day tracheotomy was made and 3.2 mg/kg body weight of curare was administered. EEG was recorded until the animal died. Curare affected the sleep phases, and the brain showed slightly marked high voltage activity with slow waves (rudimentary telencephalic sleep) which either lasted continually or was interrupted by electrical seizures, which later became manifest somatically. In some cases it was interrupted by spontaneous and frequently repeated arousal reactions. Curare did not cause changes in frequency or duration of electrical seizure or arousal reaction. SOURCE: *Activitas nervosa superior*, v. 7, no. 3, 1965, 257-258

TOPIC TAGS: rat, EEG, pharmacology

ABSTRACT: Experiments were conducted with rats; it was found that 72 hours of sleep deprivation induced by repeated intraperitoneal administration of amphetamine significantly disturbs normal periodicity of the synchronizing and desynchronizing mechanism. To compensate for the lack of sleep a mechanism is used by the body which activates the hippocampal EEG rhythm. Orig. art. has: 1 table. [Orig. art. in Eng.]

TITLE: Absorption lines in the moving atmosphere. I. Effect of the velocity gradient in the atmosphere on the equivalent widths of the spectral lines

SOURCE: Acta astronomica, v. 15, no. 2, 1965, 177-184

TOPIC TAGS: spectral line, spectral energy distribution, absorption line

ABSTRACT: On the assumption that a spectral line is formed by true absorption, it is shown that the velocity gradient, independent of the sign of this quantity, increases the equivalent width of the line. With growing velocity gradient, the curve of growth slides upward to the right along the extension of its rectilinear part. In the extreme case of an infinitely great velocity gradient, the curve of growth degenerates into a straight line. The authors thank Professor A. Opolski for his valuable discussion of the problem.  Title : On Certain Rhodanine Derivatives Possessing  
 Bacteriostatic Action  
 Orig. Pub. : Roczn. chem., 1958, 32, No 3, 545-552  
 Abstract : 3-methyl-5-R-(Ia-c), 3-ethyl-5-R-(IIa-c) and  
 3-phenyl-5-R-rhodanines (IIIa,b, where a is  
 R=CH<sub>3</sub>, b is R=C<sub>2</sub>H<sub>5</sub>, c is R=C<sub>6</sub>H<sub>5</sub>), as well  
 as 3,5,5-trimethyl-(IV), 3-methyl-5,5-diethyl-  
 (V), 3,5,5-triethyl- (VI), 3-isopropyl- (VII),  
 3-isopropyl-5-methyl- (VIII), 5,5-dimethyl-  
 (IX), 5,5-dimethyl-3-ethyl- (X) and 3-ethyl-  
 rhodanines (XI), 3-methylrhodanineacetic-5  
 acid (XII) and its methyl ether (XIIa), and  
 methyl (XIII) and ethyl (XIV) ethers of 3-

Abstract : ethylrhodanineacetic-5 acid (XV), were synthe-  
cont'd. sized and investigated for their bacteriostatic  
activity. 0.3 mole of  $CS_2$  is gradually poured  
into a mixture of 0.3 mole of  $NH_2CH_3 \cdot HCl$  and  
0.65 mole of KOH in 50 ml. of water, then 0.3  
mole of  $CH_3CH_2BrCOONa$  in 0.1 liter of water  
is added at  $20^\circ$ , mixed for 18 hours, acidified  
with 50%  $H_2SO_4$ , and Ia is separated out, with  
yield of 62%, b.p.  $126-130^\circ/2$  mm. Analogously,  
the following are obtained (substance, b.p. in
